No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (27 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1992 articles are as shown on the article title page; if no fee code appears on the title page, the copy fee is the same as for current articles.

# Contents of Volume 117

## Number 1, July 1992

JEFFREY H. KORDOWER, MELANIE BURKE-WATSON, JOHN D. ROBACK, AND BRUCE H. WAINER. Stability of Septohippocampal Neurons following Excitotoxic Lesions of the Rat Hippocampus ..... 1

ALEXANDER P. AUCHUS AND VIRGINIA M. PICKEL. Quantitative Light Microscopic Demonstration of Increased Pallidal and Striatal $Met^5$-Enkephalin-like Immunoreactivity in Rats following Chronic Treatment with Haloperidol but Not with Clozapine: Implications for the Pathogenesis of Neuroleptic-Induced Movement Disorders ..... 17

SANJAY KHANNA AND JOHN G. SINCLAIR. Responses in the CA1 Region of the Rat Hippocampus to a Noxious Stimulus ..... 28

H. GEERTS, R. NUYDENS, R. NUYENS, F. CORNELISSEN, M. DE BRABANDER, P. PAUWELS, P. A. J. JANSSEN, Y. H. SONG, AND E. M. MANDELKOW. Sabeluzole, a Memory-Enhancing Molecule, Increases Fast Axonal Transport in Neuronal Cell Cultures ..... 36

EDWIN S. PURCELL AND VINCENT H. GATTONE II. Immune System of the Spontaneously Hypertensive Rat. I. Sympathetic Innervation ..... 44

WAI-MING LEUNG, V. E. NATHANIEL, AND E. J. H. NATHANIEL. A Morphological and Morphometric Analysis of the Optic Nerve in the Hypothyroid Rat ..... 51

N. RAJAOFETRA, N. KÖNIG, P. POULAT, L. MARLIER, F. SANDILLON, M. J. DRIAN, M. GEFFARD, AND A. PRIVAT. Fate of B1–B2 and B3 Rhombencephalic Cells Transplanted into the Transected Spinal Cord of Adult Rats: Light and Electron Microscopic Studies 59

JAMES M. KERNS AND CLAUDIA LUCCHINETTI. Electrical Field Effects on Crushed Nerve Regeneration ..... 71

ANA RUSOVAN, MARTIN KANJE, AND KJELL HANSSON MILD. The Stimulatory Effect of Magnetic Fields on Regeneration of the Rat Sciatic Nerve Is Frequency Dependent ... 81

*Brief Communications*

FREDRICK J. SEIL, FELIX P. ECKENSTEIN, AND PAUL J. REIER. Induction of Dendritic Spine Proliferation by an Astrocyte Secreted Factor ..... 85

A. BIGNAMI, R. ASHER, AND G. PERIDES. The Extracellular Matrix of Rat Spinal Cord: A Comparative Study on the Localization of Hyaluronic Acid, Glial Hyaluronate-Binding Protein, and Chondroitin Sulfate Proteoglycan ..... 90

JOSEPH ACTON, JOHN E. MCKENNA, AND RONALD MELZACK. Amitriptyline Produces Analgesia in the Formalin Pain Test ..... 94

JONATHAN R. DAY, BON HONG MIN, NICHOLAS J. LAPING, GLOVER MARTIN III, HEINZ H. OSTERBURG, AND CALEB E. FINCH. New mRNA Probes for Hippocampal Responses to Entorhinal Cortex Lesions in the Adult Male Rat: A Preliminary Report 97

*Erratum*

Volume 116, Number 2 (1992): Paul B. Farel and Sibyl E. Wray, "Neuromuscular Specificity following Cross-Stage Hindlimb Transplantation," pp. 180–188 ..... 100

## Number 2, August 1992

PÄIVI LIESI. Neuronal Migration on Laminin Involves Neuronal Contact Formation Followed by Nuclear Movement inside a Preformed Process ..... 103

BIN CHENG AND MARK P. MATTSON. Glucose Deprivation Elicits Neurofibrillary Tangle-like Antigenic Changes in Hippocampal Neurons: Prevention by NGF and bFGF ..... 114

STEPHEN L. MINGER AND PETER DAVIES. Persistent Innervation of the Rat Neocortex by Basal Forebrain Cholinergic Neurons Despite the Massive Reduction of Cortical Target Neurons. I. Morphometric Analysis ..... 124

STEPHEN L. MINGER AND PETER DAVIES. Persistant Innervation of the Rat Neocortex by Basal Forebrain Cholinergic Neurons Despite the Massive Reduction of Cortical Target Neurons. II. Neurochemical Analysis ..... 139

O. ISACSON AND M. V. SOFRONIEW. Neuronal Loss or Replacement in the Injured Adult Cerebral Neocortex Induces Extensive Remodeling of Intrinsic and Afferent Neural Systems ..... 151

MACIEJ POLTORAK, KOTARO SHIMODA, AND WILLIAM J. FREED. L1 Substrate Enhances Outgrowth of Tyrosine Hydroxylase-Immunoreactive Neurites in Mesencephalic Cell Culture ..... 176

BALTAZAR GOMEZ-MANCILLA AND PAUL J. BÉDARD. Effect of Chronic Treatment with (+)-PHNO, a $D_2$ Agonist in MPTP-Treated Monkeys ..... 185

E. SHOHAMI, J. L. NATES, L. GLANTZ, V. TREMBOVLER, Y. SHAPIRA, AND U. BACHRACH. Changes in Brain Polyamine Levels Following Head Injury ..... 189

CORNELIS H. LANGEVELD, CORNELIS A. M. JONGENELEN, JAN J. HEIMANS, AND JOHANNES C. STOOF. 8-Chloro-cyclic Adenosine Monophosphate, a Novel Cyclic AMP Analog That Inhibits Human Glioma Cell Growth in Concentrations That Do Not Induce Differentiation ..... 196

RICHARD S. K. YOUNG, MATTHEW J. DURING, WILLIAM J. AQUILA, DAVID TENDLER, AND EILEEN LEY. Hypoxia Increases Extracellular Concentrations of Excitatory and Inhibitory Neurotransmitters in Subsequently Induced Seizure: *In Vivo* Microdialysis Study in the Rabbit ..... 204

GABRIELE RÖHN, MICHAEL SCHLENKER, AND WULF PASCHEN. Activity of Ornithine Decarboxylase and *S*-Adenosylmethionine Decarboxylase in Transient Cerebral Ischemia: Relationship to the Duration of Vascular Occlusion ..... 210

*Brief Communication*

ANTHONY L. VACCARINO, HÉLÈNE PLAMONDON, AND RONALD MELZACK. Analgesic and Aversive Effects of Naloxone in BALB/c Mice ..... 216

## Number 3, September 1992

S. L. CRANER, G. E. HOFFMAN, J. S. LUND, A. L. HUMPHREY, AND R. D. LUND. cFos Labeling in Rat Superior Colliculus: Activation by Normal Retinal Pathways and Pathways from Intracranial Retinal Transplants ..... 219

R. SCHMIDT-KASTNER, D. MELLER, AND U. T. EYSEL. Immunohistochemical Changes of Neuronal Calcium-Binding Proteins Parvalbumin and Calbindin-D-28k Following Unilateral Deafferentation in the Rat Visual System ..... 230

SHINGO KAWAMURA AND NOBUYUKI YASUI. Observation of the Blood–Brain Barrier Function and Vasomotor Response in Rat Microcirculation Using Intravital Fluorescence Microscopy ..... 247

KORTARO TANAKA, YASUO FUKUUCHI, SHINTARO GOMI, SHUTARO TAKASHIMA, BAN MIHARA, TOSHITAKA SHIRAI, SHIGERU NOGAWA, HIROYUKI NOZAKI, AND EIICHIRO NAGATA. Alteration of Second-Messenger Ligand Binding Following 2-Hr Hemispheric Ischemia in the Gerbil Brain ..... 254

FINNBOGI R. THORMODSSON, EDNA ANTONIAN, AND BERNICE GRAFSTEIN. Extracellular Proteins of Goldfish Optic Tectum Labeled by Intraocular Injection of $^{3}$H-Proline ... 260

JÜRGEN W. UNGER AND YORN SCHMIDT. Quisqualic Acid-Induced Lesion of the Nucleus Basalis of Meynert in Young and Aging Rats: Plasticity of Surviving NGF Receptor-Positive Cholinergic Neurons ..... 269

P. LACOMBE, R. SERCOMBE, J. L. CORREZE, V. SPRINGHETTI, AND J. SEYLAZ. Spreading Depression Induces Prolonged Reduction of Cortical Blood Flow Reactivity in the Rat 278

GREGORY W. SCHRIMSHER AND PAUL J. REIER. Forelimb Motor Performance Following Cervical Spinal Cord Contusion Injury in the Rat ..... 287

ALVIN W. LYCKMAN AND GEORGE D. BITTNER. Axonal Conduction and Electrical Coupling in Regenerating Earthworm Giant Axons ..... 299

CHARLES H. HOCKMAN, M. DOUGLAS GOSSMAN, NORMAN E. LIDDELL, AND WILLIAM E. RENEHAN. Restoration of Orbicularis Oculi Function by Contralateral Orbicularis Oculi Innervated Muscle Flap vs Neuromuscular Pedicle Technique ..... 307

LINDA W. DICKERSON AND JENNIFER S. BUCHWALD. Long-Latency Auditory-Evoked Potentials: Role of Polysensory Association Cortex in the Cat ..... 313

W. PASCHEN, G. MIES, AND K.-A. HOSSMANN. Threshold Relationship between Cerebral Blood Flow, Glucose Utilization, and Energy Metabolites during Development of Stroke in Gerbils ..... 325

*Author Index for Volume 117* ..... 334

NOTICE

The Subject Index for Volume 117 will appear in the December 1992 issue as part of a cumulative index for the year 1992.

**EXPERIMENTAL NEUROLOGY**
A Journal of Neuroscience Research

# Information for Authors

*Experimental Neurology* publishes the results and conclusions of original research in neuroscience with a particular emphasis on novel findings in neural development, regeneration, plasticity, and transplantation. Emphasis is also placed on basic mechanisms underlying or related to neurological disorders. Although the journal does not consider case reports for publication, information that bridges basic and clinical questions is of a high priority. Brief communications of important new data and scholarly reviews of important questions will be considered for publication. Manuscripts in other areas of neuroscience will be considered if they show relevance to the primary mission of the journal. Policy regarding publication of experiments on unanesthetized animals conforms with the standards for use of laboratory animals established by the Institute of Laboratory Animal Resources, U.S. National Academy of Sciences. Experiments in which curariform agents are used must be justified and details as to steps taken to reduce or avoid distress to the animal must be provided, particularly with regard to electrical stimulation. Exposition must be as brief as is consistent with accuracy and clarity. Lengthy bibliographic lists should be avoided.

**Manuscript Submission.** Submit the original manuscript and three copies. These will **not** be returned to the author. One original glossy print of each illustration is required, along with three photocopies or laser copies. Four original glossy prints should be provided if machine copies are not clear and sharp. **These prints will not be returned to the author.** Submissions should be sent to:

John R. Sladek, Jr., Ph.D.
Editor-in-Chief, *Experimental Neurology*
The Neuroscience Institute
University of Health Sciences/
The Chicago Medical School
3333 Green Bay Road
North Chicago, Illinois 60064-3095

Telephone: (708) 578-3000

Manuscripts are accepted for editorial review with the understanding that the content has not been published previously except as a preliminary report and is not submitted elsewhere for publication. **Furthermore, it is understood that they will have received the appropriate clearance and the approval of all authors necessary for publication prior to submission.** Articles and any other materials published in *Experimental Neurology* represent the opinions of the authors and should not be construed to reflect the opinions of the Editors or Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

**Consideration for Publication.** Each manuscript received by the editorial office is screened initially by a member of the Editorial Board in order to judge its relevancy to the interests of the journal. Those contributions judged to be of sufficient interest then are assigned to one or more reviewers who are asked to provide both a critique and priority rating.

**Cover Photographs.** Authors are encouraged to submit potential cover photographs for consideration directly to the Editor at the time of submission of a manuscript.

**Preparation of Manuscript.** Prepare typewritten or word-processed manuscripts double-spaced throughout, including abstract, acknowledgments, and references, on one side of 8.5 × 11-inch (21.6 × 28-cm) or A4 white paper and in *Experimental Neurology* format. Number the pages consecutively. All authors are encouraged but not restricted to limit the length of manuscripts submitted to about 20 pages (21.6 × 28 cm), double-spaced, including tables and figures (about 6 printed pages).

*Page 1* should contain the article title, authors' names, and complete affiliations. At the bottom of page 1 place any footnotes to the title, indicated by superscript *, †, ‡. *Key words* should also be included at the bottom of this page. Ideally, 6–8 identifiers should be provided to aid the indexing and review process. *Page 2* should contain a proposed running head (abbreviated form of the title) of less than 50 characters, the name, mailing address, and telephone number and/or fax number of the author to whom proofs should be sent, and a short abstract. The *abstract* should be a summary of the problem, the methods, and the results and their significance in a single paragraph of 250 words or less.

Most recommendations of the Council of Biology Editors are to be followed; consult the *CBE Style Manual,* 5th ed. (Council of Biology Editors, 9650 Rockville Pike, Bethesda, MD 20814). Follow *Webster's New International Dictionary,* Third Edition, Unabridged (1986) for spelling and division of words. Nonstandard abbreviations should be minimal. Use numerals with standard units of measurement and for any number above nine. The metric system must be used and abbreviations made according to the International System (*Standard Metric Practice Guide,* American Society for Testing Materials, Philadelphia, 1970.)

**Brief Communications.** Short manuscripts of no more than 6 or 7 double-spaced typed pages and limited to 1 figure and/or table (approximately 2 printed pages) will be considered. They should have an abstract of a few sentences, but no section headings.

**Critical Reviews.** Authors should first communicate with the Editor-in-Chief describing the topic and intent of potential review articles prior to submission to the journal. Reviews should emphasize emerging fields or should critically analyze existing data and questions. At the discretion of the Editor-in-Chief these reviews may be accompanied by scientific dialogue from other contributors.

**Illustrations.** Number figures with Arabic numerals in order of appearance in the text. Type all legends consecutively on a separate sheet. Plan all figures to fit the proportions of the printed page (7 1/8 × 9 in.; 18.2 × 23 cm). All illustrations should be in finished form suitable for reproduction and no larger than 8.5 × 11 in. (21.6 × 28 cm). Identify all figures on the back lightly *in soft pencil* with the author(s) name(s) and figure number; indicate the TOP. Each component of a composite figure should be lettered consistently on the lower or upper left face and referred to in text and caption.

Lettering on drawings should be of professional quality or generated by *high-resolution computer* graphics and should be large enough (10–12 points) to take a reduction of 50 to 60%. Freehand, penciled, or typewritten lettering is not acceptable. Drawings should be made in black India ink on tracing linen, smooth-surface white paper, or Bristol board. Alternatively, *high-quality computer* graphics may be acceptable. Symbols used to identify points within a graph should be large enough that they will be easily distinguishable after reduction. Plot graphs on blue coordinate or white paper. Grid lines that are to reproduce must be shown in black. All drawings may be submitted as glossy prints. Photocopies submitted as original artwork are not acceptable.

Halftone photographs should be on glossy paper and as rich in contrast as possible. Only those parts of the photograph that are necessary to illustrate the matter under discussion should be submitted. Areas that are not essential should be cut off. For best reproduction provide clear, sharp, glossy prints with adequate contrast. The best results will be obtained if authors match the contrast and density of all figures appearing on a single plate. If this is not possible, provide unmounted original art. Providing an overlay that indicates the most critical areas of micrographs will also aid in ensuring high-quality reproduction.

Illustrations in color can be accepted only if the authors defray the cost. If mounting is necessary, color figures must be mounted on 10- to 12-point *flexible* illustration board or paper due to the nature of the reproduction process.

**Tables.** Organize tables horizontally on the page if possible. Tables should be numbered consecutively with Arabic numerals in order of appearance in the text and collected at the end of the manuscript. Type each table double-spaced on a separate page with a short descriptive caption directly above the table and with any necessary footnotes (indicated by superscript lowercase *italic* letters) typed directly below the table.

**References.** Use numerals in parentheses in the text. List references alphabetically and number consecutively, but do not incorporate "personal communications" or "unpublished observations" into this list. Abbreviations of journal titles should conform to *Index Medicus,* a complete list of which appears in its December issue. Note below some examples of punctuation and format for *Experimental Neurology.*

1. BRODAL, A. 1981. *Neurological Anatomy in Relation to Clinical Medicine,* 3rd ed. Oxford Univ. Press, New York.
2. CASPARY D. M., L. P. RYBAK, AND C. L. FAINGOLD. 1985. The effects of inhibitory and excitatory amino-acid neurotransmitters on the response properties of brain stem auditory neurons. Pages 198–226 in D. G. Drescher, Ed., *Auditory Biochemistry.* Thomas, Springfield, IL.
3. NOBLE, L. J., AND J. R. WRATHALL. 1988. Blood–spinal cord barrier disruption proximal to a spinal cord transection in the rat: Time course and pathways associated with protein leakage. *Exp. Neurol.* **99:** 567–578.

**Proofs.** Two sets of proofs and the original manuscript are sent to the author designated to receive them. To avoid delay in publication, only necessary changes should be made, and proofs and manuscript should be returned promptly. Authors will be charged for alterations that exceed 10% of the total cost of composition.

**Reprints.** Fifty reprints without covers will be provided free of charge to the corresponding author. Additional reprints may be ordered using the form included with the proofs.

# NeuroImage

Editor-in-Chief
**Arthur W. Toga**
*UCLA School of Medicine, Los Angeles, California*

Associate Editors

**Scott E. Fraser**
*California Institute of Technology, Pasadena*

**Stanley B. Kater**
*Colorado State University, Fort Collins*

**Jeff W. Lichtman**
*Washington University School of Medicine, St. Louis, Missouri*

**Donald J. Woodward**
*University of Texas, Southwestern Medical Center at Dallas*

**NeuroImage** focuses on the visualization of all neuroscientific data. The journal intends to advance the state of knowledge of nervous system structure and function through the publication of articles describing neurobiological insights revealed through the use of imaging.

Original research articles on the application of imaging and image analysis in two main areas are published: where imaging is crucial to the biological question and reveals new information or insight; and where the imaging technique itself is innovative. The scope of research includes all types of imaging, image synthesis, and image analysis applied to basic research—from the whole-brain level to the subcellular and molecular levels.

*For information on manuscript submission, please write or telephone:*

**NeuroImage**
Editorial Office
Seventh Floor
1250 Sixth Avenue
San Diego, California 92101
(619) 699-6469

Volumes 1 (1992), 4 issues
In the U.S.A. and Canada: $235.00
ISSN 1053-8119
All other countries: $261.00

Sample copies and privileged personal rates are available upon request.

*For more information, please write or call:*

# 3 Perfect Lab Partners

*The articles in the topic-oriented issues comprising these journals present new methods in the biological sciences, immunology, and neuroscience. Single issues are available for $30.00 each.*

## Methods
### A Companion to Methods in Enzymology

Volumes 4–5 (1992), 6 issues
ISSN 1046-2023
In the U.S.A. and Canada: $132.00
All other countries: $168.00

Editors-in-Chief
**John N. Abelson and Melvin I. Simon**
California Institute of Technology, Pasadena

Each issue of **Methods** is devoted to a specific approach or technique and describes its theoretical basis. Emphasis is placed on clear descriptions of protocols which allow applications of these methods in any modern laboratory.

---

New in 1992
## ImmunoMethods

Volume 1 (1992), 3 issues
ISSN 1058-6687
In the U.S.A. and Canada: $66.00
All other countries: $85.00

Editor
**John J. Langone**
Food and Drug Administration
Rockville, Maryland

**ImmunoMethods** provides focused, detailed, and authoritative reports on immunological methods and their applications.The scope encompasses humoral and cellular immunity, and biological mediators that can affect the integrity and function of the immune system. These factors include both endogenous substances and environmental agents.

---

New in 1992
## NeuroProtocols
### A Companion to Methods in Neurosciences

Volumes 1 (1992), 3 issues
ISSN 1058-6741
In the U.S.A. and Canada: $66.00
All other countries: $85.00

Editor-in-Chief
**P. Michael Conn**
The University of Iowa College of Medicine
Iowa City

Associate Editor
**Sean Murphy**
The University of Iowa College of Medicine
Iowa City

**NeuroProtocols** provides methodology of central significance to the neurosciences. Techniques presented will range from molecular biology to whole animal physiology. Advantages and disadvantages of the methods will be included as will ways in which their "pitfalls" can be avoided. Each issue will be edited by an expert in the subject being covered.

---

SPECIAL RATE
Available to institutions interested in subscribing to **METHODS: A Companion to Methods in Enzymology** and/or **ImmunoMethods** and/or **NeuroProtocols**. Please contact the Publisher for information.
